PROFESSIONAL SUMMARY

Software Engineering student (1st year) with experience in web development and API integration. Skilled in React, TypeScript, and dashboard design. Currently exploring different areas within software engineering to identify the specialization that best aligns with my ambitions and interests. Particularly interested in database design, web development, software architecture, and embedded systems.

Projects

Academic Full-Stack AI Project-ISSAT	Sousse, Tunisia	Feb 2026 – April 2026
- Built an MVP full-stack platform using FastAPI and Next.js for real-time vehicle inspection and identity verification workflows. - Developed a computer vision pipeline using YOLO-based object detection and OCR (PaddleOCR) to extract Tunisian license plates from video streams. - Designed an identity verification pipeline combining OCR-based CIN extraction (Tesseract OCR) for agent validation with OTP authentication via email and WhatsApp for secure role-based access.		
Personal Projects — Full-Stack Development	Remote	Aug 2025 – Feb 2026
- Built an Analytics Dashboard (Live Demo) using Next.js, TypeScript, and MongoDB. - Implemented Excel upload, data parsing, filtering, and JSON export features. - Designed interactive data visualizations to support decision-making and analysis.		
Web Development Intern — YottaByte	Remote	Jul 2025 – Aug 2025
- Developed a web application integrating multiple external APIs (6–10 public APIs) using Express.js (Live Demo). - Designed and implemented a customizable dashboard interface for data visualization. - Built API calls and handled data aggregation to provide real-time insights.		
Final Year Project — SW Consulting	Monastir, Tunisia	Jan 2025 – Jun 2025
- Designed and implemented SourceLang, a custom programming language targeting full-stack web development. (Documentation). - Built a full transpiler pipeline: lexical analysis, parsing, and AST generation using C, Flex, and Bison. - Applied concepts of compiler design, memory management, and syntax tree transformation.		
Software Engineering Intern — WebProSoft	Monastir, Tunisia	Jun 2024 – Jul 2024
- Developed a desktop/web image recognition platform using .NET (C#), HTML, and JavaScript. - Integrated Azure AI models for image classification and analysis. - Designed a user-friendly interface to facilitate interaction with AI features.		

EDUCATION

M.Eng	Sousse University, Higher Institute of Applied Sciences and Technology of Sousse, Software Engineering	Sept 2025 – In Progress
BS	University of Monastir, Higher Institute of Informatics and Mathematics, Computer Science and Software Engineering (with honors)	Sept 2022 – June 2025

TECHNOLOGIES

- Languages:** C, Java, Python, C++, C#, JavaScript, TypeScript, SQL (PL/SQL)
- Frameworks & Libraries:** React.js, Next.js, Express.js, .NET
- Databases:** MySQL, PostgreSQL, MongoDB
- Development Tools & Practices:** Git, GitHub, Agile/Scrum, MVC Architecture, Object-Oriented Programming (OOP), CI/CD, Linux
- Networking:** CCNA 1 Certified
